

JSON STRUCTURE OVERVIEW This document explains the structure of your JSON file using: ✓
Objects {} ✓ Arrays [] ✓ Key-value pairs "key": value ✓ Nested (deep) structures TOP-LEVEL
STRUCTURE { "foodItems": [...] } Each element inside foodItems is an OBJECT: { "id": "string",
"name": "string", "normalized_name": "string", "category": "string", "subcategory": "string", "servingSize":
"string", "householdMeasure": "string", "calories": number, "totalCarbohydrates": number, "netCarbs":
number, "fiber": number, "sugars": number, "protein": number, "totalFat": number, "glycemicIndex":
number, "glycemicLoad": number, "diabetesTypes": ["string"], "recommendations": { ... }, "dataSource":
"string", "createdAt": "string", "lastUpdated": "string" } RECOMMENDATIONS OBJECT {
"diabetes_type1": { ... }, "diabetes_type2": { ... } } Each diabetes type contains: { "condition": "string",
"safetyLevel": "string", "reasoning": "string", "keyPoints": ["string"], "servingAdvice": "string",
"timingAdvice": "string", "pairingSuggestions": ["string"], "alternatives": [...], "alternativeReasoning":
"string", "nutritionalBenefits": [...], "potentialConcerns": [...], "preparationTips": [...] }
ALTERNATIVES ARRAY [{ "foodId": "string", "advantage": "string", "improvement": "string", "bestFor":
["string"] }] NUTRITIONAL BENEFITS ARRAY [{ "category": "string", "description": "string", "strength":
"string" }] POTENTIAL CONCERNS ARRAY [{ "category": "string", "description": "string", "severity":
"string" }] PREPARATION TIPS ARRAY [{ "category": "string", "description": "string" }] SUMMARY
Your JSON uses: ✓ Objects {} ✓ Arrays [] ✓ Key-value pairs ✓ Deep nesting ✓ Structured diabetes
recommendations model
